

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A delivery unit, with a baffle, with a fuel pump arranged therein and with a radial-onflow filter which is arranged on ~~the~~ an underside of a bottom of the baffle and which is formed by shaped elements projecting axially from the underside of the bottom of the baffle, so that an axially running gap is formed in each case between two adjacent shaped elements ~~in each case~~, and which surrounds an inlet port arranged in the bottom of the baffle, characterized in that at least one region (12) for throughflow is arranged perpendicularly to the gaps (11, 11a, 11b) and perpendicularly to the throughflow direction, and in that the at least one region (12) connects at least two adjacent gaps (11, 11a, 11b) and wherein the at least one region (12) and gaps (11, 11a, 11b) define a fuel filter media.
2. (currently amended) The delivery unit as claimed in claim 1, characterized in that the regions (12) for throughflow are formed by at least one, ~~preferably three,~~ standing ~~elements~~ element (8) arranged on the underside of the bottom (7) of the baffle (5) and having a greater axial length than the shaped elements (10).
3. (currently amended) The delivery unit as claimed in claim 1 ~~or 2~~, characterized in that the regions (12) for throughflow are formed by shaped elements (10) with different axial lengths.
4. (currently amended) The delivery unit as claimed in claim ~~2~~ 1, characterized in that the shaped elements (8) are arranged in a plurality of rows lying one behind the other in the throughflow direction.

5. (currently amended) The delivery unit as claimed in ~~at least one of claims 2 to 3~~ claim 1, characterized in that the shaped elements ~~(40)~~ are of equal axial length and are arranged in a row.
6. (currently amended) The delivery unit as claimed in claim ~~2~~ 4, characterized in that ~~the~~ shaped elements ~~(40)~~ of a radially outer row possess a smaller axial length than ~~the~~ shaped elements ~~(8)~~ of a radially inner row.
7. (currently amended) The delivery unit as claimed in claim 1, characterized in that the axially running gaps (11, 11a, 11b) between the shaped elements ~~(40)~~ possess different lengths and widths.
8. (currently amended) The delivery unit as claimed in claim ~~2~~ 1, characterized in that the shaped elements ~~(40)~~ are arranged in segments (15) on the underside of the bottom (7) of the baffle (5).
9. (original) The delivery unit as claimed in claim 8, characterized in that the segments (15) are arranged releasably on the underside of the bottom (7) of the baffle (5).
10. (original) The delivery unit as claimed in claim 8, characterized in that the segments (15) are shaped in one piece on the baffle (5).
11. (currently amended) The delivery unit as claimed in claim 8, characterized in that the distance between two adjacent segments (15) is no greater than the distance of the shaped elements ~~(40)~~ from one another.
12. (previously presented) The delivery unit as claimed in claim 8, characterized in that the segments (15) are arranged in a plurality of rows in the throughflow direction.
13. (currently amended) The delivery unit as claimed in claim 2, characterized in that the shaped elements ~~(40)~~ are arranged circularly.

14. (currently amended) The delivery unit as claimed in claim 2, characterized in
that the shaped elements ~~(10)~~ are arranged in the form of a polygon.
